- (57) Claim

1. A safe comprising:

a casing (1);

means defining an access opening (4) in the casing (1), said access opening (4) having a periphery of a first width;

a door (6) capable of closing the access opening (4); and

support means for movably supporting the door;

characterised in that:

said door (6) has a width greater than said first width, and can engage behind the periphery of the access opening (4); and

the support means includes means for tilting the door (6) to open or close the access opening (4); and means for displacing the door (6) to engage behind the periphery of the access opening (4).
